

Micro-Computed Tomography (MCT) Beamline

A major milestone was achieved at the end of September with ARPANSA providing approval* to finalise construction, commission, and use the MCT Beamline at the ANSTO Australian Synchrotron.

Despite the impact of a two week shutdown in the construction sector due to COVID, hot commissioning is due to commence towards the end of October, and the beamline is on track for first user's experiments in June 2022.

**Subject to radiation dose requirements being met during hot commissioning.*
