

Medium Energy X-ray Absorption Spectroscopy (MEX-1) Beamline

First merit users on MEX-1 A significant milestone for the beamline

On 23 November, Professor Brendan Kennedy and PhD candidate Ahmadi Permana were the first merit users on the MEX-1 beamline. The team from The University of Sydney used the beam time to investigate the local structure and oxidation state of perovskite materials and were very pleased with the data they collected.

This milestone comes after achievement of first light in June 2022, and is a credit to the hard work and dedication of the entire MEX team. Work will continue over the coming months and years to roll out MEX's full capability.
