

# Advanced Diffraction & Scattering (ADS 1&2) Beamlines

December 2022 saw the arrival of a donated insertion device courtesy of the PSI Swiss Light Source. The wiggler was lifted into the Synchrotron crescent area, and preparations are currently underway to move the device into the tunnels, and into position as a interim source for the ADS1 & ADS2 Beamlines. Installation and commissioning of the wiggler is scheduled for the May 2023 shutdown.
