

Advanced Diffraction & Scattering (ADS-1 and ADS-2) Beamlines

Installation of “Bluey” the Wiggler for the ADS Beamlines: Bluey is a 11.6 Tonne Wiggler gifted from the Swiss Light Source (part of PSI), which has been hiding in the crescent for the past few months. During the shutdown, the Engineering and Accelerator teams worked alongside a specialist moving company to drive Bluey through some very tight spaces inside the storage ring tunnels and into its final location as an interim ID source for the new ADS beamlines.
